School Comparison of All Accountability Proficiency by Free and Reduced Priced Services Percentage - 4 Year Trend
2022-23 Tables

Introduction

The purpose of this report is to compare All Accountability (MCA and MTAS) performance across Minnesota schools of similar socioeconomic profiles and sizes. At each level (elementary, middle, and high) and in each subject (math, reading, and science), schools are grouped according to the percentage of students, schoolwide, receiving for free and reduced priced (FRP) services (e.g., 10.0-19.9%, 20.0-29.9%) and then listed in order of the percentage of students scoring at a proficient ("Meets" or "Exceeds") level on either the MCA or MTAS, corresponding to a calculated percentile ranking.

Percentile ranks were calculated including schools statewide if they had at least 10 students testing in each subject in each tested grade. Schools were limited for display based on meeting level-specific enrollment thresholds in the 7-county metro area, as well as Benton, Olmstead, Sherburne, St. Louis, Stearns, and Wright counties. Percentile ranks of all non-charter schools included in the report are provided for the most recent year of test data (in this case, 2022-23), as well as the previous three years.

For each level and subject, the initial set of tables show results for schoolwide FRP ranges in which Anoka-Hennepin schools fall. Following these tables are addenda which show results for schools in FRP ranges in which no Anoka-Hennepin schools fall. Within an FRP range, schools are listed from highest to lowest based on the 2023 MCA percentile ranking aligned to proficiency rates. Schools may have been in a different FRP range in previous years. Anoka-Hennepin schools are highlighted and bolded. Double lines separate the schools falling in the top quartile of the schools who were assigned a percentile ranking within the FRP range from those in the bottom three quartiles (excluding charter schools). Charter schools located in the Anoka-Hennepin School District geographic region are shown in bold, italicized text and are listed alongside district schools in proficiency order.

Schoolwide demographics, along with participation rates, are provided in the addenda at the end of the document. In the sections after that, proficiency rates are reported by student group broken down by FRP decile tables based on schoolwide FRP rates. In these sections, the proficiency rate is displayed for only students in the student group of focus at each school. Student groups included are students receiving free or reduced priced services (FRP), students not receiving free or reduced priced services (non-FRP), students of color (SOC), students receiving special education services (SpEd), and multilingual (ML) students receiving English language acquisition services. In these student group specific sections, the same schools are dispayed that met the criteria for the "all students" section. Schools whose MCA and MTAS data were suppressed due to low cell size for the given student group will be listed at the bottom of the table with the cells for the proficiency rate and percentile ranking colored gray.

Additionally, there are further details regarding calculations and data sources provided in an appendix in the final page of the document.

The purpose of this report is to compare All Accountability (MCA and MTAS) performance across Minnesota schools of similar socioeconomic profiles and sizes. At each level (elementary, middle, and high) and in each subject (math, reading, and science), schools are grouped according to the percentage of students receiving free and reduced priced (FRP) services (e.g., 10-19.9%, 20-29.9%) and then listed in order of the percentage of students scoring at a proficient ("Meets" or "Exceeds") level on either the MCA or MTAS, corresponding to a calculated percentile ranking. The inclusion of the MTAS in the ranking began in 2018-19, coinciding with MDE providing "All Accountability" performance level counts in state assessment files.

Percentile ranks were determined only for MN schools of district types 1 (Independent Districts and Schools), 3 (Special Districts and Schools), 8 (State Operated Integration Magnets), and 61 (Education Districts). Percentile ranks were calculated including schools statewide if they had at least 10 students testing in each subject in each tested grade aligned with the level of focus.

The percentage of students receiving FRP services was calculated using the state public enrollment file based on the students in all grades at the given school, not just tested grades, due to the file structure and data suppression rules applied by MDE to MCA, MTAS, and demographic files provided.

Schools were limited for display based on location and enrollment thresholds. Schools located in the counties of Anoka, Benton, Carver, Dakota, Hennepin, Olmsted, Ramsey, Scott, Sherburne, St. Louis, Stearns, Washington, and Wright were included, chosen to capture the Minneapolis-St. Paul metro area along with Duluth, Rochester, St. Cloud, and St. Michael. The enrollment threshold at the elementary level was 200 students across grades 3, 4, and 5. At the middle school level, the threshold was 500 students enrolled across grades 6, 7, and 8. For high school math and science, 100 students needed to be enrolled in grade 11, and high school reading required 100 students enrolled in grade 10. Percentile ranks for prior years are provided for schools that met these criteria in the current year. "NA" indicates that historical trend data was not available in the given year due to the absence of test data, a change in grades served for the particular school, or the school not yet existing.

For each level and subject, the initial set of tables show results for FRP ranges in which Anoka-Hennepin schools fall. Following those tables are addenda which show results for schools in FRP ranges in which no Anoka-Hennepin schools fall. Within an FRP range, schools are listed from highest to lowest based on the current year MCA percentile ranking, aligned to proficiency rates. Schools may have been in a different FRP range in previous years. Anoka-Hennepin schools are highlighted and bolded. Double lines separate the schools falling in the top quartile of the schools displayed in the FRP range from those in the bottom three quartiles (excluding unranked schools, both charter schools and Anoka-Hennepin Schools whose student group data were supressed).

Charter schools located in the Anoka-Hennepin School District geographic region are shown in bold, italicized letters and are listed alongside district schools in proficiency order. Charter schools were not included in the percentile ranking of schools and may not have met the level-specific enrollment threshold. However, all charter schools listed had at least 10 students testing in each subject (math, reading, and science) and grade.

In the population and participation addenda, schools that meet display criteria are listed with their student demographics and participation rates. Student demographics reflect the entire site, not just tested grades. Included there are the FRP rate, percentage of students of color (SOC), percentage of students receiving special education (SpEd) services, and the percentage of students who are multilingual learners (ML). In the right-most columns are MCA and MTAS participation rates, which were calculated for math and reading by using Public Enrollment and All Accountability files provided by MDE. The participation rate was calculated for each subject using the total number of testers as the numerator and the total number of students enrolled in testing grades at that school as the denominator. Use of this publicly available data may lead to participation rates over 100%. Also in the population addenda, data noted "suppressed" are unavailable due to MDE data suppression rules. In this section, NA indicates that the site did not meet display criteria in the given subject.
